OUR PROCESS

Longevity's process insight and understanding of the challenges associated with supporting all aspects of business strategy is the result of many years of experience. Longevity's consultants are vendor agnostic and will work within your organization's existing technology stack, making recommendations for COTS or Open Source analytics tools as needed. It is our goal to use our real-world experience and vast knowledge of technology and business to provide you with the best possible solution for your needs.

Cloud Based Solutions
Reducing costs and maximizing resources

Cloud computing allows companies to realize the benefits of sharing IT resources throughout their organizations and maximizing their effectiveness. These resources can be dynamically reallocated based on demand, both locally and globally, and help reduce the cost of dedicated hardware, licensing and rack space. Longevity's team of experts is poised to help you leverage cloud computing in your organization, allowing you to cut costs and focus on your core business.

Longevity offers the following services in support of our clients' cloud computing initiatives:

Cloud Migration Strategy

Preparing to move your environment to the cloud can be a daunting task and requires in-depth planning and preparation. Longevity's team of vetted professionals employ today's best-practices to make sure that your migration runs smoothly, reducing downtime and costs. Our consultants will work with you to design a sound strategy for your move, planning ahead, evaluating your environment and its requirements, understanding potential variables and preparing your resources to ensure a successful migration.

Cloud-based Application Development

Cloud-based Application Development is becoming more and more important in today's marketplace. Creating applications that allow users to take advantage of their device's unique features can help a business connect with their customers in a much deeper, real-time manner. Longevity's consultants are able to leverage their expertise to ensure that your organization is producing products that speak to your target market, enhancing their interaction and engagement with your company and its products and services.

Our team takes into account many important aspects of Cloud-based Application Development, including:

- Users' limited attention
- Minimizing keystrokes
- Ensuring the product is task-oriented
- Minimizing functions

Longevity is able to support you and your Cloud-based Application Development initiatives with our vast experience and hands-on knowledge. In addition, we offer a suite of Cloud-based Solutions Services to help ensure that your strategy is sound and your investment is secure.

OUR MISSION

Team Longevity is dedicated to providing the best possible solution for an organization. Drawing from a vast pool of knowledge and expertise, we are committed to ensuring that our customers are satisfied from day one. The bottom-line result is improved productivity, increased collaboration and greater efficiency in mission critical operations.

OUR ROLE

Longevity's role is that of a true industry partner, supporting the process from beginning to end. We have an outstanding record of past performance helping our clients achieve greater customer and employee satisfaction, eliminate waste, improve efficiency and reduce operational costs throughout their organizations.

Longevity Consulting, LLC (Longevity) is an SBA 8(a) certified, Service-Disabled Veteran-Owned, Small Disadvantaged Business with over 12 years of experience providing information technology, solutions-based consulting services. Longevity offers expertise in facilitating enterprise-wide IT strategic planning, enabling clients to align their strategic vision, business processes and information needs with their applications and technology infrastructure. Longevity's role is that of a true industry partner, in which we support the process from beginning to end, delivering quality services and continuously working to exceed the client's expectations. We have an outstanding record of past performance helping our clients achieve greater customer and employee satisfaction, eliminate waste and reduce expenses throughout their organizations.

Past Performance

Department of Education
Cloud-Hosted Peer Review Panel Assignment System

Longevity has developed a Cloud-hosted, Panel Assignment System that automates application and reviewer panel assignments based on the unique competition rules of each grant competition. This competition website solution supports links to the Department of ED's peer reviewer orientation webinar, downloadable versions of Technical Review Forms, and links to other application and peer review support materials. This dynamic solution enables users to publish any required competition website changes within 24 hours of receiving feedback from competition staff.

Our website framework provides a standardized, quick-turn solution that can be completely customized for a given competition within 3 days. Our comprehensive FedRamp-certified, Cloud-hosted, Peer Review support systems and processes leverage surveys, dashboards, role-specific workflow and back-end databases during various stages of the grant application and reviewer management lifecycles to accelerate and streamline application eligibility screening, reviewer identification and recruiting, Conflict of Interest, peer reviews and post-award reporting. Our website solution allows us to quickly identify potential reviewers, collect competition specific information from each reviewer, and customize the communications delivered to reviewers before, during and after the peer review process. We continuously assess and re-evaluate system functionality to determine ways to enhance the tool to best meet the needs of our federal grants management customers. An added benefit to using Longevity's integrated grants management system, the PRMS is built on open standards in the Amazon GovCloud, and information can be easily exported in standard SQL so that it may be seamlessly merged back into any existing ED application and reviewer databases.
