Enterprise Security Services
Protecting your systems from unauthorized access

At Longevity, we take a multi-faceted approach to security. We work with our clients to provide security intelligence and risk management solutions through a host of Emergency Preparedness and Continuity of Operations (COOP) services, protecting critical business information and systems from unauthorized access. Our services range from providing critical security controls that protect against attack to assisting in the development of compliant risk management programs and policies. The coordination of so many moving parts and gaining the buy-in of so many stakeholders can seem like an overwhelming prospect, and Longevity is pleased to leverage our considerable expertise to lead these efforts and provide real value to your organization.

Our Enterprise Security services encompass the following critical areas:

Identity and Access Management
Identity and Access Management is a broad administrative service area that deals with the identification and control of individuals within a system and managing their access to that system's resources through user rights and restrictions. As businesses grow and the number of users and devices on a network increase, it becomes more and more challenging to manage the enterprise and ensure that stakeholders have accurate, efficient access to the information they need. Longevity has a proven track record of helping our clients improve their organizations' security and productivity, while reducing costs and eliminating redundant efforts.

Information Assurance
Information Assurance uses physical, technical and administrative controls to assure information and mitigate risks with regard to the use, processing, storage or transmission of data and systems. Our Information Assurance experts have real-world experience and will work to protect your system's data throughout the project. Our proven procedures foster an environment in which all parties are able to collaborate efficiently and effectively, regardless of location. As a leader in our industry, Longevity's mission is to provide quality products and services to our clients on every engagement, designing solutions that meet and exceed their expectations and giving them peace of mind.

Mission Assurance
Mission Assurance is the process of ensuring an organization's critical and essential functions continue under all hazard situations. This assurance is created by proper mission planning, development, implementation, testing and continual process improvement when necessary. The process involves reaching across an entire organization, including partners, customers and suppliers, to meet all the requirements of the engagement and account for all contingencies.

OUR MISSION

Longevity is dedicated to providing the best possible solution for an organization. Drawing from a vast pool of knowledge and expertise, we are committed to ensuring that our customers are satisfied from day one. The bottom-line result is improved productivity and increased transparency in mission critical operations.

Longevity's role is that of a true industry partner, supporting the process from beginning to end. We have an outstanding record of past performance helping our clients achieve greater customer and employee satisfaction, eliminate waste, improve efficiency and reduce operational costs throughout their organizations.

A True Industry Partner
Providing critical security controls

Longevity Consulting, LLC (Longevity) is an SBA 8(a) certified, Service-Disabled Veteran-Owned, Small Disadvantaged Business with over 12 years of experience providing information technology, solutions-based consulting services. Longevity offers expertise in facilitating enterprise-wide IT strategic planning, enabling clients to align their strategic vision, business processes and information needs with their applications and technology infrastructure. Longevity's role is that of a true industry partner, in which we support the process from beginning to end, delivering quality services and continuously working to exceed the client's expectations. We have an outstanding record of past performance helping our clients achieve greater customer and employee satisfaction, eliminate waste and reduce expenses throughout their organizations.

Past Performance

National Science Foundation (NSF)
Identity Management

Our Identity Management experts were tasked with creating customer web services for enterprise-wide authentication and consolidating authentication for over 40 diverse applications. We played a key role in creating communication and outreach materials and promoting the new system to stakeholders across the organization. Our efforts allowed the NSF to begin moving toward a single sign-on for the enterprise and helped define their strategy for enterprise role management and Federal Identity Credential and Access Management (FICAM) compliance.

Headquarters Department of the Army Directorate of Mission Assurance
Mission Assurance

Longevity provided contract and program management, developed Protection Program implementation guidance and smart books, developed online training for 12 protection program security elements and designed and implemented internal and external SharePoint sites to allow the program to run smoothly and efficiently for employees and customers. Additionally, Longevity provided shelter-in-place kit support by replacing expiring food bars, water and batteries in shelter-in-place kits that support over 14,000 HQDA personnel and inventorying kit locations and location points of contact.

Fairfax County Government, Virginia
Information Assurance

Longevity provided executive level consulting and analytical services in support of the National Capital Region (NCR) Interoperability Service (IS). We played a key role in the development of governance to support inter-jurisdictional on-ramping of jurisdictional sponsored infrastructure, services, applications and information. The frameworks developed by Longevity include Capital Planning and Investment Control, Interconnection Agreements, Incident Management and Change Management to enable Information Technology standardization across the 38 jurisdictions in the metropolitan region.
